

Demographic Questionnaire

Welcome to the BreastScreening project.

In this project, we aim at developing a CADx system to ease the detection of Breast cancer, not only by reducing the diagnosis time, but also, to provide the user with new techniques to detect lesions. We will develop an AI system with eXplanability techniques to give a second opinion, or to be a filter system that will diagnose a patient case and reorder the priority of the patient by the classification.

This questionnaire as the goal to gather information about the user. This information will be used to create a profile. That profile will be used to merge data and understand some patterns that may exist. Those patterns may help us adapt the system according to that.

This questionnaire will be able to be performed in less than 5 minutes. It is of utmost convenience that you answer with rigor and honesty, as this is the only way to fulfill the objective of this questionnaire.

There are no right or wrong answers in relation to any of the items, the intention being only to ascertain the data provided. This questionnaire is confidential and voluntary. The treatment of this, in turn, is carried out in a global way, not being subject to an individualized analysis, which means that your anonymity is respected.
